1. Project Assignment

1.1 Context
During the semester I'll work on different projects, to show these projects and their deliverables I'll be making a website portfolio.

1.2 Goal of the project
The goal of the project is to make an environment where I can show my work throughout the semester and where I explain why I made certain choices during the coming projects.
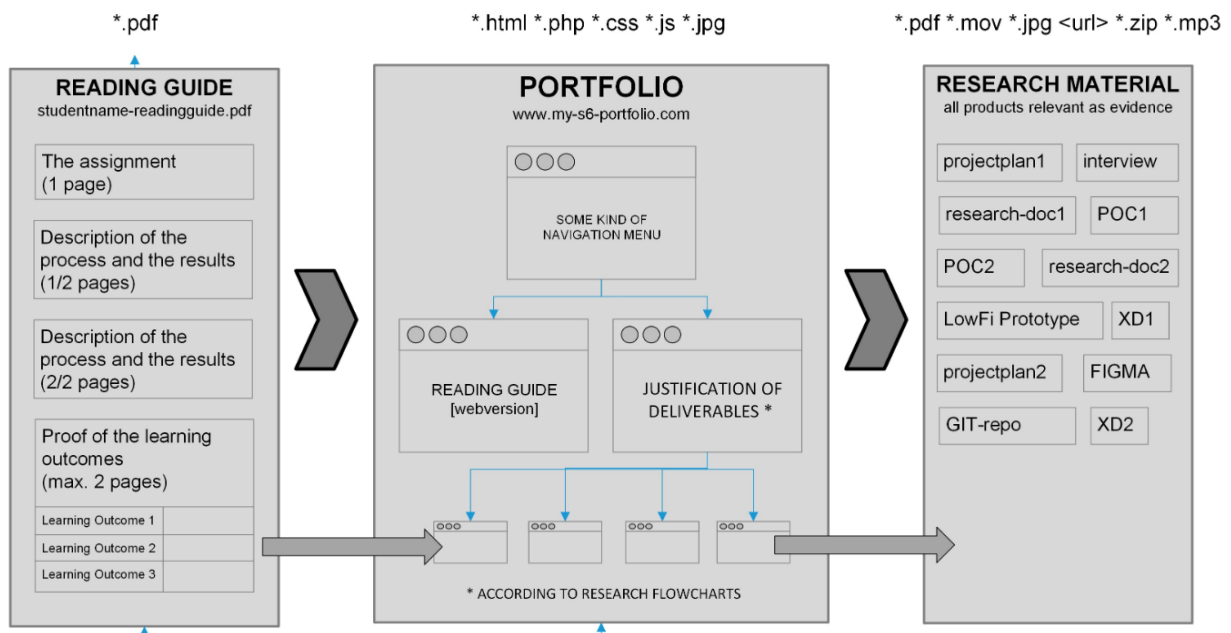

1.3 The assignment
The assignment of the project is to make a website where you showcase your work and choices.

1.4 Conditions
We have to make the website with our own code, which means we can't make use of webbuilders like google sites and Wix. The website also has to be media worhty.

1.5 Finished products

1.6 Research questions
The main research question is: How can I make an interactive portfolio website?

To answer this question I have a couple of smaller research questions:
- How can I make the portfolio easy and intuitive to navigate?
- What should always be easy to find, no matter which page you're on on the website?
- How can I make my portfolio personal to me?

2.   Approach and Planning

2.1   Approach

The first 3 weeks I'll be working on my portfolio. I'll first start by doing research about what the requirements of the portfolio are. I'll also look at portfolio websites. After having done my research I'll start sketching my own website. I'll test these sketches and designs with my peers so that I won't have to change big things during the development process. After the designs and sketches I'll start developing the website. During the development I'll regularly show it to my peers to get feedback.

2.2   Research methods

For the research question "how can I make the portfolio easy and intuitive to navigate" I'll use the research methods Literature study and Design pattern research. I'll research which libraries and frameworks are most commonly used for websites, how they work and if they fit in the context of my portfolio.

For the research question "What should always be easy to find, no matter which page you're on on the website" I'll use the research methods Literature study, Sketching and Peer review. I'll start with the Literature study. After the Literature study I'll start sketching the design of my website. During the design I'll ask my peers for feedback.

For the research question "How can I make my portfolio personal to me" I'll use the research methods Sketching, Prototyping and Peer review. I'll design a couple of different mock-ups which reflect different aspects of myself, I'll then ask my peers for feedback on it and prototype the version that reflects me the best.

2.3   Time plan

Phasing	Start	Ready
1 Research	14-09-2023	21-09-2023
2 Designing	21-09-2023	28-09-2023
3 Starting development	28-09-2023	29-09-2023
